

Developing modern day solutions for a world heritage site

Client vision:

The Estate team at Blenheim Palace believe in preserving the Palace's past and present for future generations to enjoy. With a vast array of property types, the responsibility to keep visitors, staff and residents safe is immense. 4see were set the task of helping the Estate team in addressing the challenges posed by asbestos management and removal.

How 4see helped:

We approached the challenge using our 4track system, starting with an in-depth gap analysis of the Estate's incomplete asbestos removal reports which enabled us to establish which properties did and didn't have correct documentation. Following the gap analysis, the 4see team then developed a clear report,

action plan and phased programme of works. This included the implementation of an asbestos policy, an overall and site specific asbestos management plan, a survey and re-inspection programme, and recommendations for training. By implementing our 4track system, the Estate team have access to the full details of asbestos management at the Palace. Our technical experts have continued to work with the Estate team on implementing further proactive site improvements.

It is essential that we get straightforward advice that works and is easy to implement. 4see understand our commercial focus and because they are highly competent, they make the whole process simple.

Dominic Hare, Chief Executive, Blenheim Palace
