

An adaptable health and safety information system for a diverse business

MALA

Client vision:

A design-led practice with expertise in integrated engineering services, MALA (M&E contractor) has several operating divisions and a diverse workforce. They needed a simple way to ensure that staff had access to up to date health and safety information from a central point. 4see were asked to develop a system that could deliver this.

How 4see helped:

Having developed and managed MALA's health and safety documentation for many years, 4see understood the documentation that was in place. Therefore we began by conducting a review of the management of MALA to determine who needed access to which documents. We then developed a MALA

specific version of our 4track system that could be adapted to suit their needs. This system is structured to enable each of their operating divisions to use the system in a unique way, whilst providing access to key core documents in a central location. This system now holds all training records and allows senior management to access their action management system, giving them comfort in knowing that all key areas of their business are being managed appropriately.

“4see have helped us to reach the next level of development within our business. The 4track system is a key tool in ensuring that our staff are working in line with current requirements.”

Paul Zumeris, CEO, MALA Group
